

## Godfrey Omollo

The project implemented in South Sudan, funded by the International Association for College Admission Counseling and other partners, significantly transformed the higher education landscape by providing essential technological resources such as solar systems, laptops, internet routers, and lighting. This initiative directly addressed the challenges faced by students transitioning from paper-based to online university applications, offering them not only the tools but also the training necessary to navigate this digital shift. The impact of this project is evident in the enhanced access to higher education, improved digital literacy, and the ability for night-time study, marking a significant milestone for the community's educational development.
